Meet Zoot! Zoot is from a far-off planet called Zootus, light years away from planet Earth. This amazing planet creates technology to inspire living beings across the galaxy.

Meet Mr. Donaldson! He loves technology and builds satellites at home to search for life outside of Earth. His latest satellite is his most powerful, and to his amazement, after he blasted a message off to space, he found a friend. Far away on the planet Zootus, Zoot spotted the simple message "Hi," a simple word that starts all friendships.

Every day, the two new friends sent messages across the stars to each other. Donaldson shared tales from his lively kindergarten class, while Zoot talked about breakthroughs in technology and inventions their planet was developing. One particular invention Zoot mentioned caught Donaldson's attention: a machine designed to boost confidence and encourage success.

Donaldson wanted that invention for his class and explained how helpful the machine would be on Earth. It didn't take any convincing Zoot immediately packed up his spaceship for a voyage to Earth. At light speed, Zoot made it to Earth and was hovering over the home of the Kindergarten teacher.

After unpacking the invention, the pair spent many hours setting up the machine. They recorded the message, "I can do it." This message activated the device to send an encouragement frequency to whoever spoke the message. The machine was ready, and Donaldson said "Goodbye" to his friend from another planet.

When Monday morning's bell rang, Mr. Donaldson had a present for his students. He carefully lifted a curious-looking machine from his box and set it on the desk. "This," he began, "is the Possibilities Machine. It's a marvelous invention that, with a few important words, can encourage you to do anything."

"What does it do? Where'd it come from? Who made it? Can we all try it?" The questions poured in. Mr. Donaldson smiled and said, "I have a special friend. I can't tell you where he is from; let's say he's out of this world. He shared this invention that sends rays of encouragement that boost your mind, filling it with determination and will-power every time you say, 'I can do it!'"

That evening, Mr. Donaldson's homework assignment was to use the power of the phrase "I can do it" when the students were trying something new or challenging to test the machine.

The students were amazed at what they could accomplish when they told themselves, "I can do it." The next day, every student in the class shared their stories of victory.
